

This paragraph exists to verify that text items extracted by pdf.js can be concatenated into a single rawText string while preserving an exact character offset for every item. Each visual line below becomes one text item, which maps to one CleanPiece in the chunk pipeline.

Numbers and units for the speak layer: 1,234 items, 56.7 kg, 89 %.

A hyphenated word split across lines is a known extraction hazard: information should be rejoined without leaving a stray hyphen in rawText.

Footer marker 1 -- headers and footers must be droppable.

This paragraph exists to verify that text items extracted by pdf.js can be concatenated into a single rawText string while preserving an exact character offset for every item. Each visual line below becomes one text item, which maps to one CleanPiece in the chunk pipeline.

Numbers and units for the speak layer: 1,234 items, 56.7 kg, 89 %.

A hyphenated word split across lines is a known extraction hazard: information should be rejoined without leaving a stray hyphen in rawText.

Footer marker 2 -- headers and footers must be droppable.

This paragraph exists to verify that text items extracted by pdf.js can be concatenated into a single rawText string while preserving an exact character offset for every item. Each visual line below becomes one text item, which maps to one CleanPiece in the chunk pipeline.

Numbers and units for the speak layer: 1,234 items, 56.7 kg, 89 %.

A hyphenated word split across lines is a known extraction hazard: information should be rejoined without leaving a stray hyphen in rawText.

Footer marker 3 -- headers and footers must be droppable.

This paragraph exists to verify that text items extracted by pdf.js can be concatenated into a single rawText string while preserving an exact character offset for every item. Each visual line below becomes one text item, which maps to one CleanPiece in the chunk pipeline.

Numbers and units for the speak layer: 1,234 items, 56.7 kg, 89 %.

A hyphenated word split across lines is a known extraction hazard: information should be rejoined without leaving a stray hyphen in rawText.

Footer marker 4 -- headers and footers must be droppable.

This paragraph exists to verify that text items extracted by pdf.js can be concatenated into a single rawText string while preserving an exact character offset for every item. Each visual line below becomes one text item, which maps to one CleanPiece in the chunk pipeline.

Numbers and units for the speak layer: 1,234 items, 56.7 kg, 89 %.

A hyphenated word split across lines is a known extraction hazard: information should be rejoined without leaving a stray hyphen in rawText.

Footer marker 5 -- headers and footers must be droppable.

This paragraph exists to verify that text items extracted by pdf.js can be concatenated into a single rawText string while preserving an exact character offset for every item. Each visual line below becomes one text item, which maps to one CleanPiece in the chunk pipeline.

Numbers and units for the speak layer: 1,234 items, 56.7 kg, 89 %.

A hyphenated word split across lines is a known extraction hazard: information should be rejoined without leaving a stray hyphen in rawText.

Footer marker 6 -- headers and footers must be droppable.

This paragraph exists to verify that text items extracted by pdf.js can be concatenated into a single rawText string while preserving an exact character offset for every item. Each visual line below becomes one text item, which maps to one CleanPiece in the chunk pipeline.

Numbers and units for the speak layer: 1,234 items, 56.7 kg, 89 %.

A hyphenated word split across lines is a known extraction hazard: information should be rejoined without leaving a stray hyphen in rawText.

Footer marker 7 -- headers and footers must be droppable.

This paragraph exists to verify that text items extracted by pdf.js can be concatenated into a single rawText string while preserving an exact character offset for every item. Each visual line below becomes one text item, which maps to one CleanPiece in the chunk pipeline.

Numbers and units for the speak layer: 1,234 items, 56.7 kg, 89 %.

A hyphenated word split across lines is a known extraction hazard: information should be rejoined without leaving a stray hyphen in rawText.

Footer marker 8 -- headers and footers must be droppable.

This paragraph exists to verify that text items extracted by pdf.js can be concatenated into a single rawText string while preserving an exact character offset for every item. Each visual line below becomes one text item, which maps to one CleanPiece in the chunk pipeline.

Numbers and units for the speak layer: 1,234 items, 56.7 kg, 89 %.

A hyphenated word split across lines is a known extraction hazard: information should be rejoined without leaving a stray hyphen in rawText.

Footer marker 9 -- headers and footers must be droppable.

This paragraph exists to verify that text items extracted by pdf.js can be concatenated into a single rawText string while preserving an exact character offset for every item. Each visual line below becomes one text item, which maps to one CleanPiece in the chunk pipeline.

Numbers and units for the speak layer: 1,234 items, 56.7 kg, 89 %.

A hyphenated word split across lines is a known extraction hazard: information should be rejoined without leaving a stray hyphen in rawText.

Footer marker 10 -- headers and footers must be droppable.

This paragraph exists to verify that text items extracted by pdf.js can be concatenated into a single rawText string while preserving an exact character offset for every item. Each visual line below becomes one text item, which maps to one CleanPiece in the chunk pipeline.

Numbers and units for the speak layer: 1,234 items, 56.7 kg, 89 %.

A hyphenated word split across lines is a known extraction hazard: information should be rejoined without leaving a stray hyphen in rawText.

Footer marker 11 -- headers and footers must be droppable.

This paragraph exists to verify that text items extracted by pdf.js can be concatenated into a single rawText string while preserving an exact character offset for every item. Each visual line below becomes one text item, which maps to one CleanPiece in the chunk pipeline.

Numbers and units for the speak layer: 1,234 items, 56.7 kg, 89 %.

A hyphenated word split across lines is a known extraction hazard: information should be rejoined without leaving a stray hyphen in rawText.

Footer marker 12 -- headers and footers must be droppable.
